TASK		ASSIGNED TO		PROGRESS		START		END																																																										
System Definition																																																																		
Fundamentation and Contextualization		All team		100%		10/14/22		10/17/22																																																										
Motivation and project goals		All team		100%		10/17/22		10/19/22																																																										
Analysis and viability of the process		All team		100%		10/19/22		10/23/22																																																										
Define a work team		All team		100%		10/23/22		10/28/22																																																										
Execution Plan		All team		100%		10/18/22		10/20/22																																																										
Gather and analysis of requirements																																																																		
Define method to get the requirements				50%		10/19/22		10/23/22																																																										
Gather of requirements				50%		10/21/22		10/26/22																																																										
Analysis of requirements						10/26/22		10/29/22																																																										
Organization of requirements						10/26/22		10/28/22																																																										
Validation						10/26/22		10/29/22																																																										
Conceptual Model																																																																		
Present the approach to the model						10/29/22		11/3/22																																																										
Identify and explain the entities						11/4/22		11/8/22																																																										
Identify the relationships between entities						11/9/22		11/14/22																																																										
Identify and formalize the attributes						11/15/22		11/19/22																																																										
Present and explain the diagram						11/9/22		11/13/22																																																										
Logical Model																																																																		
Construction and validation of the logic data model						date		date																																																										
Data normalization						date		date																																																										
Presentation and explanation of the logical model						date		date																																																										
Validation of model						date		date																																																										
Task 5						date		date																																																										
Physical Implementation																																																																		
Translate logical scheme to SQL						date		date																																																										
Define and characterize views in SQL						date		date
